Directors & other Sr. Executives with BE 210LC Hyd. Excavator

The Hydraulic Excavator model “BE210LC” is designed for maximum utilization, best-in-class fuel efficient and ergonomically designed cabin which adds to maximum work performance. Its operating mass is 21,000 kg with a bucket capacity of about 1.0 cu.m. This Excavator is best suited for various construction and infrastructure excavation activities and has standard mode for normal working conditions and ‘H’ mode for Heavy Duty applications.

BE210LC Hydraulic Excavator launched at EXCON 2019

Apart from this, BEML is showcasing its other upgraded construction equipment such as Motor Graders models “BG605-1” & “BG405A”, Bulldozers models “BD65-1” & “BD85-1” and Wheel Loader model “BL30-1”.

It may be noted that, BEML has indigenously designed and developed over 40 products through its R&D and exported to 65 countries around the world.
